- Setting the lockout duration to a minimum of 30 minutes or until the user's identity is confirmed.			customer is responsible for ORG,
			backups, own VMs, & networks.
8.3.5 If passwords/passphrases are used as authentication factors to meet Requirement 8.3.1, they	Responsible	Responsible	phoenixNAP is responsible for back end
are set and reset for each user as follows:	пезропзівіе	responsible	servers and back end networks;
- Set to a unique value for first-time use and upon reset.			customer is responsible for ORG,
- Forced to be changed immediately after the first use.			backups, own VMs, & networks.
8.3.6 If passwords/passphrases are used as authentication factors to meet Requirement 8.3.1, they	Responsible	Responsible	phoenixNAP is responsible for back end
meet the following minimum level of complexity:			servers and back end networks;
- A minimum length of 12 characters (or IF the system does not support 12 characters, a minimum			customer is responsible for ORG,
length of eight characters).			backups, own VMs, & networks.
- Contain both numeric and alphabetic characters.			, , , , , , , , , , , , , , , , , , , ,
			<u> </u>

8.3.7 Individuals are not allowed to submit a new password/passphrase that is the same as any of the last four passwords/passphrases used.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
8.3.8 Authentication policies and procedures are documented and communicated to all users including:  - Guidance on selecting strong authentication factors.  - Guidance for how users should protect their authentication factors.  - Instructions not to reuse previously used passwords/passphrases.  - Instructions to change passwords/passphrases if there is any suspicion or knowledge that the password/passphrases have been compromised and how to report the incident.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
8.3.9 If passwords/passphrases are used as the only authentication factor for user access (i.e., in any single-factor authentication implementation) then either:  - Passwords/passphrases are changed at least once every 90 days, OR  - The security posture of accounts is dynamically analyzed, and real-time access to resources is automatically determined accordingly.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
8.3.10 Additional requirement for service providers only: If passwords/passphrases are used as the only authentication factor for customer user access to cardholder data (i.e., in any single- factor authentication implementation), then guidance is provided to customer users including:  - Guidance for customers to change their user passwords/passphrases periodically.  - Guidance as to when, and under what circumstances, passwords/passphrases are to be changed.	Not Applicable	Not Applicable	phoenixNAP does not have access to customer cardholder data environments.
8.3.10.1 Additional requirement for service providers only: If passwords/passphrases are used as the only authentication factor for customer user access (i.e., in any single-factor authentication implementation) then either:  - Passwords/passphrases are changed at least once every 90 days, OR  - The security posture of accounts is dynamically analyzed, and real-time access to resources is automatically determined accordingly.	Responsible	Responsible	phoenixNAP does not utilize multi- factor authentication and is unable to force customers to change their passwords every 90 days. The customer is responsible for submitting a support ticket to phoenixNAP every 90 days to update.
<ul> <li>8.3.11 Where authentication factors such as physical or logical security tokens, smart cards, or certificates are used:</li> <li>Factors are assigned to an individual user and not shared among multiple users.</li> <li>Physical and/or logical controls ensure only the intended user can use that factor to gain access.</li> </ul>	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
8.4 Multi-factor authentication (MFA) is implemented to secure access into the C 8.4.1 MFA is implemented for all non-console access into the CDE for personnel with administrative		Responsible	phoenixNAP does not have a CDE.
access.			Customer is responsible for ORG, backups, own VMs, & networks.
8.4.2 MFA is implemented for all access into the CDE.	Not Applicable	Responsible	phoenixNAP does not have a CDE. Customer is responsible for ORG, backups, own VMs, & networks.

8.4.3 MFA is implemented for all remote network access originating from outside the entity's network that could access or impact the CDE as follows:  - All remote access by all personnel, both users and administrators, originating from outside the entity's network.  - All remote access by third parties and vendors.  8.5 Multi-factor authentication (MFA) systems are configured to prevent misuse  8.5.1 MFA systems are implemented as follows:  - The MFA system is not susceptible to replay attacks.  - MFA systems cannot be bypassed by any users, including administrative users unless specifically documented, and authorized by management on an exception basis, for a limited time period.  - At least two different types of authentication factors are used.  - Success of all authentication factors is required before access is granted.	Responsible	Responsible	phoenixNAP does not have a CDE. Customer is responsible for ORG, backups, own VMs, & networks.  phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
<ul> <li>8.6 Use of application and system accounts and associated authentication factors</li> <li>8.6.1 If accounts used by systems or applications can be used for interactive login, they are managed as follows: <ul> <li>Interactive use is prevented unless needed for an exceptional circumstance.</li> <li>Interactive use is limited to the time needed for the exceptional circumstance.</li> <li>Business justification for interactive use is documented.</li> <li>Interactive use is explicitly approved by management.</li> <li>Individual user identity is confirmed before access to account is granted.</li> <li>Every action taken is attributable to an individual user.</li> </ul> </li> </ul>		Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
8.6.2 Passwords/passphrases for any application and system accounts that can be used for interactive login are not hard coded in scripts, configuration/property files, or bespoke and custom source code.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
8.6.3 Passwords/passphrases for any application and system accounts are protected against misuse as follows:  - Passwords/passphrases are changed periodically (at the frequency defined in the entity's targeted risk analysis, which is performed according to all elements specified in Requirement 12.3.1) and upon suspicion or confirmation of compromise.  - Passwords/passphrases are constructed with sufficient complexity appropriate for how frequently the entity changes the passwords/passphrases.		Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
9.1 Processes and mechanisms for restricting physical access to cardholder data 9.1.1 All security policies and operational procedures that are identified in Requirement 9 are:	are defined and understo	Shared Responsibility	phoenixNAP is responsible for the
<ul> <li>Documented.</li> <li>Kept up to date.</li> <li>In use.</li> <li>Known to all affected parties.</li> </ul>	Shared Responsibility	S. a. ca responsibility	physical security of the phoenixNAP data center only. Customers are responsible for designating personnel and the security within their rented space.
9.1.2 Roles and responsibilities for performing activities in Requirement 9 are documented, assigned, and understood.	Shared Responsibility	Shared Responsibility	phoenixNAP is responsible for the physical security of the phoenixNAP data center only. Customers are responsible for designating personnel and the security within their rented space.

9.2 Physical access controls manage entry into facilities and systems containing of	cardholder data.		
9.2.1 Appropriate facility entry controls are in place to restrict physical access to systems in the CDE.		Responsible	phoenixNAP does not have a CDE. phoenixNAP is responsible for the physical security of the data center, where virtual environments may live.  Customers are responsible for the physical security and data protection of their own environments.
9.2.1.1 Individual physical access to sensitive areas within the CDE is monitored with either video cameras or physical access control mechanisms (or both) as follows:  - Entry and exit points to/from sensitive areas within the CDE are monitored.  - Monitoring devices or mechanisms are protected from tampering or disabling.  - Collected data is reviewed and correlated with other entries.  - Collected data is stored for at least three months, unless otherwise restricted by law.	Responsible	Responsible	phoenixNAP does not have a CDE. phoenixNAP is responsible for the physical security of the data center, where virtual environments may live.  Customers are responsible for the physical security and data protection of their own environments.
9.2.2 Physical and/or logical controls are implemented to restrict use of publicly accessible network jacks within the facility.	Responsible	Responsible	phoenixNAP physically restricts the use of publicly available network jacks within the phoenixNAP data center facility.  Customers are responsible for the physical security and data protection of their own environments.
9.2.3 Physical access to wireless access points, gateways, networking/communications hardware, and telecommunication lines within the facility is restricted.	Responsible	Responsible	phoenixNAP restricts physical access to wireless access points, gateways, networking/communications hardware, and telecommunication lines within the phoenixNAP data center facility.  Customers are responsible for the physical security and data protection of their own environments.

9.2.4 Access to consoles in sensitive areas is restricted via locking when not in use.  9.3 Physical access for personnel and visitors is authorized and managed.	Not Applicable	Responsible	phoenixNAP has no publicly available consoles in sensitive areas. All consoles in the datacenter are within customer cages.  Customers are responsible for the physical security and data protection of their own environments.
<ul> <li>9.3.1 Procedures are implemented for authorizing and managing physical access of personnel to the CDE, including:</li> <li>Identifying personnel.</li> <li>Managing changes to an individual's physical access requirements.</li> <li>Revoking or terminating personnel identification.</li> <li>Limiting access to the identification process or system to authorized personnel.</li> </ul>	Responsible	Responsible	phoenixNAP does not have a CDE. phoenixNAP is responsible for the physical security of the data center, where virtual environments may live.  Customers are responsible for the physical security and data protection of their own environments.
<ul> <li>9.3.1.1 Physical access to sensitive areas within the CDE for personnel is controlled as follows:</li> <li>Access is authorized and based on individual job function.</li> <li>Access is revoked immediately upon termination.</li> <li>All physical access mechanisms, such as keys, access cards, etc., are returned or disabled upon termination.</li> </ul>	Responsible	Responsible	phoenixNAP does not have a CDE. phoenixNAP is responsible for the physical security of the data center, where virtual environments may live.  Customers are responsible for the physical security and data protection of their own environments.
<ul> <li>9.3.2 Procedures are implemented for authorizing and managing visitor access to the CDE, including:</li> <li>Visitors are authorized before entering.</li> <li>Visitors are escorted at all times.</li> <li>Visitors are clearly identified and given a badge or other identification that expires.</li> <li>Visitor badges or other identification visibly distinguishes visitors from personnel.</li> </ul>	Responsible	Responsible	phoenixNAP does not have a CDE. phoenixNAP is responsible for the physical security of the data center, where virtual environments may live.  Customers are responsible for the physical security and data protection of their own environments.

9.3.3 Visitor badges or identification are surrendered or deactivated before visitors leave the facility or at the date of expiration.	Shared Responsibility	Shared Responsibility	phoenixNAP is responsible for collecting visitor badges and returning identification to visitors relating to any physical space they may have. Customers are responsible for designating personnel who may visit and for ensuring access to any rented space.
<ul> <li>9.3.4 A visitor log is used to maintain a physical record of visitor activity within the facility and within sensitive areas, including:</li> <li>The visitor's name and the organization represented.</li> <li>The date and time of the visit.</li> </ul>	Shared Responsibility	Shared Responsibility	phoenixNAP is responsible for maintaining a visitor log for the phoenixNAP data center only.
<ul> <li>The name of the personnel authorizing physical access.</li> <li>Retaining the log for at least three months, unless otherwise restricted by law.</li> </ul>			Customers are responsible for designating personnel who may visit and maintaining record of visitors for any rented space.
9.4 Media with cardholder data is securely stored, accessed, distributed, and des 9.4.1 All media with cardholder data is physically secured.	Not Applicable	Responsible	phoenixNAP does not have a cardholder data. Customer is responsible.
9.4.1.1 Offline media backups with cardholder data are stored in a secure location.	Not Applicable	Responsible	phoenixNAP does not have a cardholder data. Customer is responsible.
9.4.1.2 The security of the offline media backup location(s) with cardholder data is reviewed at least once every 12 months.	Not Applicable	Responsible	phoenixNAP does not have a cardholder data. Customer is responsible.
9.4.2 All media with cardholder data is classified in accordance with the sensitivity of the data.	Not Applicable	Responsible	phoenixNAP does not have a cardholder data. Customer is responsible.
<ul> <li>9.4.3 Media with cardholder data sent outside the facility is secured as follows:</li> <li>Media sent outside the facility is logged.</li> <li>Media is sent by secured courier or other delivery method that can be accurately tracked.</li> <li>Offsite tracking logs include details about media location.</li> </ul>	Not Applicable	Responsible	phoenixNAP does not have a cardholder data. Customer is responsible.
9.4.4 Management approves all media with cardholder data that is moved outside the facility (including when media is distributed to individuals).	Not Applicable	Responsible	phoenixNAP does not have a cardholder data. Customer is responsible.
9.4.5 Inventory logs of all electronic media with cardholder data are maintained.	Not Applicable	Responsible	phoenixNAP does not have a cardholder data. Customer is responsible.
9.4.5.1 Inventories of electronic media with cardholder data are conducted at least once every 12 months.	Not Applicable	Responsible	phoenixNAP does not have a cardholder data. Customer is responsible.

, , , , , , , , , , , , , , , , , , , ,			backups, own VMs, & networks.

<ul> <li>11.6.1 A change- and tamper-detection mechanism is deployed as follows:</li> <li>To alert personnel to unauthorized modification (including indicators of compromise, changes, additions, and deletions) to the HTTP headers and the contents of payment pages as received by the consumer browser.</li> <li>The mechanism is configured to evaluate the received HTTP header and payment page.</li> <li>The mechanism functions are performed as follows:</li> <li>At least once every seven days</li> <li>OR</li> <li>Periodically (at the frequency defined in the entity's targeted risk analysis, which is performed according to all elements specified in Requirement 12.3.1).</li> </ul>		Responsible	phoenixNAP does not have payment pages. Not applicable for phoenixNAP; customer is responsible.
<ul> <li>12.1 A comprehensive information security policy that governs and provides direction</li> <li>12.1.1 An overall information security policy is:</li> <li>Established.</li> <li>Published.</li> <li>Maintained.</li> <li>Disseminated to all relevant personnel, as well as to relevant vendors and business partners.</li> </ul>	ection for protection of th Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.1.2 The information security policy is:     Reviewed at least once every 12 months.     Updated as needed to reflect changes to business objectives or risks to the environment.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.1.3 The security policy clearly defines information security roles and responsibilities for all personnel, and all personnel are aware of and acknowledge their information security responsibilities.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.1.4 Responsibility for information security is formally assigned to a Chief Information Security Officer or other information security knowledgeable member of executive management.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.2 Acceptable use policies for end-user technologies are defined and implemen	ted.	<u> </u>	
<ul> <li>12.2.1 Acceptable use policies for end-user technologies are documented and implemented, including:</li> <li>Explicit approval by authorized parties.</li> <li>Acceptable uses of the technology.</li> <li>List of products approved by the company for employee use, including hardware and software.</li> </ul>	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.3 Risks to the cardholder data environment are formally identified, evaluated	, and managed.		

12.3.1 Each PCI DSS requirement that provides flexibility for how frequently it is performed (for example, requirements to be performed periodically) is supported by a targeted risk analysis that is documented and includes:  - Identification of the assets being protected.  - Identification of the threat(s) that the requirement is protecting against.  - Identification of factors that contribute to the likelihood and/or impact of a threat being realized.  - Resulting analysis that determines, and includes justification for, how frequently the requirement must be performed to minimize the likelihood of the threat being realized.  - Review of each targeted risk analysis at least once every 12 months to determine whether the results are still valid or if an updated risk analysis is needed.  - Performance of updated risk analyses when needed, as determined by the annual review.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.3.2 A targeted risk analysis is performed for each PCI DSS requirement that the entity meets with the customized approach, to include:  - Documented evidence detailing each element specified in Appendix D: Customized Approach (including, at a minimum, a controls matrix and risk analysis).  - Approval of documented evidence by senior management.  - Performance of the targeted analysis of risk at least once every 12 months.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
<ul> <li>12.3.3 Cryptographic cipher suites and protocols in use are documented and reviewed at least once every 12 months, including at least the following:</li> <li>An up-to-date inventory of all cryptographic cipher suites and protocols in use, including purpose and where used.</li> <li>Active monitoring of industry trends regarding continued viability of all cryptographic cipher suites and protocols in use.</li> <li>A documented strategy to respond to anticipated changes in cryptographic vulnerabilities.</li> </ul>	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
<ul> <li>12.3.4 Hardware and software technologies in use are reviewed at least once every 12 months, including at least the following:</li> <li>Analysis that the technologies continue to receive security fixes from vendors promptly.</li> <li>Analysis that the technologies continue to support (and do not preclude) the entity's PCI DSS compliance.</li> <li>Documentation of any industry announcements or trends related to a technology, such as when a vendor has announced "end of life" plans for a technology.</li> <li>Documentation of a plan, approved by senior management, to remediate outdated technologies, including those for which vendors have announced "end of life" plans.</li> </ul>	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
<ul> <li>12.4 PCI DSS compliance is managed.</li> <li>12.4.1 Additional requirement for service providers only: Responsibility is established by executive management for the protection of cardholder data and a PCI DSS compliance program to include: <ul> <li>Overall accountability for maintaining PCI DSS compliance.</li> <li>Defining a charter for a PCI DSS compliance program and communication to executive management.</li> </ul> </li> </ul>	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.

12.4.2 Additional requirement for service providers only: Reviews are performed at least once every	Responsible	Responsible	phoenixNAP is responsible for back end
three months to confirm that personnel are performing their tasks in accordance with all security			servers and back end networks;
policies and operational procedures. Reviews are performed by personnel other than those			customer is responsible for ORG,
responsible for performing the given task and include, but are not limited to, the following tasks:			backups, own VMs, & networks.
- Daily log reviews.			
- Configuration reviews for network security controls.			
- Applying configuration standards to new systems.			
- Responding to security alerts.			
- Change-management processes.			
12.4.2.1 Additional requirement for service providers only: Reviews conducted in accordance with	Responsible	Responsible	phoenixNAP is responsible for back end
Requirement 12.4.2 are documented to include:			servers and back end networks;
- Results of the reviews.			customer is responsible for ORG,
- Documented remediation actions taken for any tasks that were found to not be performed at			backups, own VMs, & networks.
Requirement 12.4.2.			
- Review and sign-off of results by personnel assigned responsibility for the PCI DSS compliance			
program.			
12.5 PCI DSS scope is documented and validated.			
12.5.1 An inventory of system components that are in scope for PCI DSS, including a description of	Responsible	Responsible	phoenixNAP is responsible for back end
function/use, is maintained and kept current.			servers and back end networks;
			customer is responsible for ORG,
			backups, own VMs, & networks.
			,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
12.5.2 PCI DSS scope is documented and confirmed by the entity at least once every 12 months and	Responsible	Responsible	phoenixNAP is responsible for back end
upon significant change to the in-scope environment. At a minimum, the scoping validation			servers and back end networks;
includes:			customer is responsible for ORG,
- Identifying all data flows for the various payment stages (for example, authorization, capture			backups, own VMs, & networks.
settlement, chargebacks, and refunds) and acceptance channels (for example, card-present, card-			,
not-present, and e-commerce).			
- Updating all data-flow diagrams per Requirement 1.2.4.			
- Identifying all locations where account data is stored, processed, and transmitted, including but			
not limited to: 1) any locations outside of the currently defined CDE, 2) applications that process			
CHD, 3) transmissions between systems and networks, and 4) file backups.			
- Identifying all system components in the CDE, connected to the CDE, or that could impact			
security of the CDE.			
- Identifying all segmentation controls in use and the environment(s) from which the CDE is			
segmented, including justification for environments being out of scope.			
- Identifying all connections from third-party entities with access to the CDE.			
- Confirming that all identified data flows, account data, system components, segmentation			
controls, and connections from third parties with access to the CDE are included in scope.			
,			
12.5.2.1 Additional requirement for service providers only: PCI DSS scope is documented and	Responsible	Responsible	phoenixNAP is responsible for back end
confirmed by the entity at least once every six months and upon significant change to the in-scope			servers and back end networks;
environment. At a minimum, the scoping validation includes all the elements specified in			customer is responsible for ORG,
Requirement 12.5.2.			backups, own VMs, & networks.

12.5.3 Additional requirement for service providers only: Significant changes to organizational structure result in a documented (internal) review of the impact to PCI DSS scope and applicability of controls, with results communicated to executive management.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.6 Security awareness education is an ongoing activity.			
12.6.1 A formal security awareness program is implemented to make all personnel aware of the entity's information security policy and procedures, and their role in protecting the cardholder data.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.6.2 The security awareness program is:  - Reviewed at least once every 12 months, and  - Updated as needed to address any new threats and vulnerabilities that may impact the security of the entity's CDE, or the information provided to personnel about their role in protecting cardholder data.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.6.3 Personnel receive security awareness training as follows:  - Upon hire and at least once every 12 months.  - Multiple methods of communication are used.  - Personnel acknowledge at least once every 12 months that they have read and understood the information security policy and procedures.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
<ul> <li>12.6.3.1 Security awareness training includes awareness of threats and vulnerabilities that could impact the security of the CDE, including but not limited to:</li> <li>Phishing and related attacks.</li> <li>Social engineering.</li> </ul>	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.6.3.2 Security awareness training includes awareness about the acceptable use of end-user technologies in accordance with Requirement 12.2.1.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.7 Personnel are screened to reduce risks from insider threats.		_	
12.7.1 Potential personnel who will have access to the CDE are screened, within the constraints of local laws, prior to hire to minimize the risk of attacks from internal sources.	Responsible	Responsible	phoenixNAP does not have a CDE and screens personnel. Customer is responsible for screening their own personnel.
12.8 Risk to information assets associated with third-party service provider (TPS	SP) relationships is mana	ged.	
12.8.1 A list of all third-party service providers (TPSPs) with which account data is shared or that could affect the security of account data is maintained, including a description for each of the services provided.	Shared Responsibility	Shared Responsibility	phoenixNAP does not have access to account data. phoenixNAP does maintain a list of TPSPs for other services provided, that are outside the scope of account data.  Customers must maintain their own list list of TPSPs according to this requirement.

<ul> <li>12.8.2 Written agreements with TPSPs are maintained as follows:</li> <li>Written agreements are maintained with all TPSPs with which account data is shared or that could affect the security of the CDE.</li> <li>Written agreements include acknowledgments from TPSPs that they are responsible for the security of account data the TPSPs possess or otherwise store, process, or transmit on behalf of the entity, or to the extent that they could impact the security of the entity's CDE.</li> </ul>	Shared Responsibility	Shared Responsibility	phoenixNAP does not have a CDE and maintains written agreements with our vendors and third-party service providers.  Customers must maintain their own written agreements with their TPSPs.
12.8.3 An established process is implemented for engaging TPSPs, including proper due diligence prior to engagement.	Shared Responsibility	Shared Responsibility	phoenixNAP utilizes a due diligence process prior to onboarding new vendors or TPSPs.  Customers must establish their own due diligence process for engaging TPSPs.
12.8.4 A program is implemented to monitor TPSPs' PCI DSS compliance status at least once every 12 months.	Shared Responsibility	Shared Responsibility	phoenixNAP monitors our vendors and TPSPs at least once every 12 months.  Customers must monitor their TPSPs in accordance with this requirement.
12.8.5 Information is maintained about which PCI DSS requirements are managed by each TPSP, which are managed by the entity, and any that are shared between the TPSP and the entity.	Shared Responsibility	Shared Responsibility	phoenixNAP maintains responsibility matrices with our TPSPs that are reviewed annually.  Customers must maintain information about PCI DSS requirement roles and responsibilities with their TPSPs in order to meet this requirement.
12.9 Third-party service providers (TPSPs) support their customers' PCI DSS c			
12.9.1 Additional requirement for service providers only: TPSPs acknowledge in writing to customers that they are responsible for the security of account data the TPSP possesses or otherwise stores, processes, or transmits on behalf of the customer, or to the extent that they coulc impact the security of the customer's CDE.	Responsible	Not Responsible	phoenixNAP does not possess or directly store, process, or transmit account data on behalf of customers.  phoenixNAP is responsible for the physical security of the data center and the backend (please explain what this includes); customer is responsible for ORG, backups, own VMs, & networks.

12.9.2 Additional requirement for service providers only: TPSPs support their customers' requests	Responsible	Not Responsible	
for information to meet Requirements 12.8.4 and 12.8.5 by providing the following upon customer			
request:			
- PCI DSS compliance status information for any service the TPSP performs on behalf of customers			
(Requirement 12.8.4).			
- Information about which PCI DSS requirements are the responsibility of the TPSP and which are			
the responsibility of the customer, including any shared responsibilities (Requirement 12.8.5).			
12.10 Suspected and confirmed security incidents that could impact the CDE are	responded to immediate	ly	
12.10.1 An incident response plan exists and is ready to be activated in the event of a suspected or	Responsible		phoenixNAP is responsible for back end
confirmed security incident. The plan includes, but is not limited to:			servers and back end networks;
- Roles, responsibilities, and communication and contact strategies in the event of a suspected or			customer is responsible for ORG,
confirmed security incident, including notification of payment brands and acquirers, at a minimum.			backups, own VMs, & networks.
- Incident response procedures with specific containment and mitigation activities for different			240.14ps, 3411 11115, & Hethorida
types of incidents.			
- Business recovery and continuity procedures.			
- Data backup processes.			
<ul> <li>Analysis of legal requirements for reporting compromises.</li> </ul>			
- Coverage and responses of all critical system components.			
Reference or inclusion of incident response procedures from the payment brands.			
neterior of modern response procedures from the payment brillius.			
12.10.2 At least once every 12 months, the security incident response plan is:	Responsible	Responsible	phoenixNAP is responsible for back end
- Reviewed and the content is updated as needed.			servers and back end networks;
- Tested, including all elements listed in Requirement 12.10.1.			customer is responsible for ORG,
			backups, own VMs, & networks.
12.10.3 Specific personnel are designated to be available on a 24/7 basis to respond to suspected or	Responsible	Responsible	phoenixNAP is responsible for back end
confirmed security incidents.	пеоропони	The Sportshold	servers and back end networks;
committed security moderns.			customer is responsible for ORG,
			backups, own VMs, & networks.
			backups, own vivis, a networks.
12.10.4 Personnel responsible for responding to suspected and confirmed security incidents are	Responsible	Responsible	phoenixNAP is responsible for back end
appropriately and periodically trained on their incident response responsibilities.			servers and back end networks;
			customer is responsible for ORG,
			backups, own VMs, & networks.
12.10.4.1 The frequency of periodic training for incident response personnel is defined in the	Responsible	Responsible	phoenixNAP is responsible for back end
entity's targeted risk analysis, which is performed according to all elements specified in	Responsible	Responsible	servers and back end networks;
			-
Requirement 12.3.1.			customer is responsible for ORG,
			backups, own VMs, & networks.

12.10.5 The security incident response plan includes monitoring and responding to alerts from security monitoring systems, including but not limited to:  - Intrusion-detection and intrusion-prevention systems.  - Network security controls.  - Change-detection mechanisms for critical files.  - The change-and tamper-detection mechanism for payment pages. This bullet is a best practice until its effective date; refer to Applicability Notes below for details.  - Detection of unauthorized wireless access points.  12.10.6 The security incident response plan is modified and evolved according to lessons learned and to incorporate industry developments.	Responsible  Responsible	Responsible  Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.  phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
12.10.7 Incident response procedures are in place, to be initiated upon the detection of stored PAN anywhere it is not expected, and include:  Determining what to do if PAN is discovered outside the CDE, including its retrieval, secure deletion, and/or migration into the currently defined CDE, as applicable.  Identifying whether sensitive authentication data is stored with PAN.  Determining where the account data came from and how it ended up where it was not expected.  Remediating data leaks or process gaps that resulted in the account data being where it was not expected.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
Appendix			
<ul> <li>A1.1.1 Logical separation is implemented as follows:</li> <li>The provider cannot access its customers' environments without authorization.</li> <li>Customers cannot access the provider's environment without authorization.</li> </ul>	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
A1.1.2 Controls are implemented such that each customer only has permission to access its own cardholder data and CDE.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
A1.1.3 Controls are implemented such that each customer can only access resources allocated to them.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.
A1.1.4 The effectiveness of logical separation controls used to separate customer environments is confirmed at least once every six months via penetration testing.	Responsible	Responsible	phoenixNAP is responsible for back end servers and back end networks; customer is responsible for ORG, backups, own VMs, & networks.

A1.2.1 Audit log capability is enabled for each customer's environment that is consistent with PCI	Responsible	Responsible	phoenixNAP is responsible for back end
DSS Requirement 10, including:			servers and back end networks;
Logs are enabled for common third-party applications.			customer is responsible for ORG,
Logs are active by default.			backups, own VMs, & networks.
Logs are available for review only by the owning customer.			
Log locations are clearly communicated to the owning customer.			
Log data and availability is consistent with PCI DSS Requirement 10.			
A1.2.2 Processes or mechanisms are implemented to support and/or facilitate prompt forensic	Responsible	Responsible	phoenixNAP is responsible for back end
investigations in the event of a suspected or confirmed security incident for any customer.			servers and back end networks;
			customer is responsible for ORG,
			backups, own VMs, & networks.
A1.2.3 Processes or mechanisms are implemented for reporting and addressing suspected or	Responsible	Responsible	phoenixNAP is responsible for back end
confirmed security incidents and vulnerabilities, including:			servers and back end networks;
Customers can securely report security incidents and vulnerabilities to the provider.			customer is responsible for ORG,
The provider addresses and remediates suspected or confirmed security incidents and			backups, own VMs, & networks.
vulnerabilities according to Requirement 6.3.1.
