

Virtual Private Data Center (VPDC)

Enterprise-Class Architecture at Scale with Software-Defined Data Center

Highly Flexible and Scalable VMware Cloud

Virtual Private Data Center (VPDC) is a shared compute platform that provides a flexible and scalable environment to host tier 1 applications, websites, or testing and development workloads. As a highly scalable and redundant solution with dedicated resources and a low starting price point, VPDC is ideal for organizations of all sizes. You can request and receive additional resources in a short timeframe to handle new products, additional applications, or provide a complete disaster recovery solution.

Fast Deployment

Spin up new VMs or storage fast and request new cloud resources with one call.

Redundancy

Redundant servers, network, and storage. Connectivity provided by seven diverse carriers.

Affordability

No upfront capital costs.
Full solutions starting as low as \$500.00 monthly.

Security, Business, and Operational Benefits

VPDC is a secure, multi-tenant cloud service, based on VMware® vCloud® Director and fully compatible with your current vSphere® environment. Automated systems for proactive management of vSphere® give you visibility into every level of the virtual infrastructure. Additionally, tools like vCloud® Networking and Security, vCenter Operations Manager, and phoenixNAP's proprietary cloud portal (PNCP) help you efficiently monitor, manage, and scale your resources.

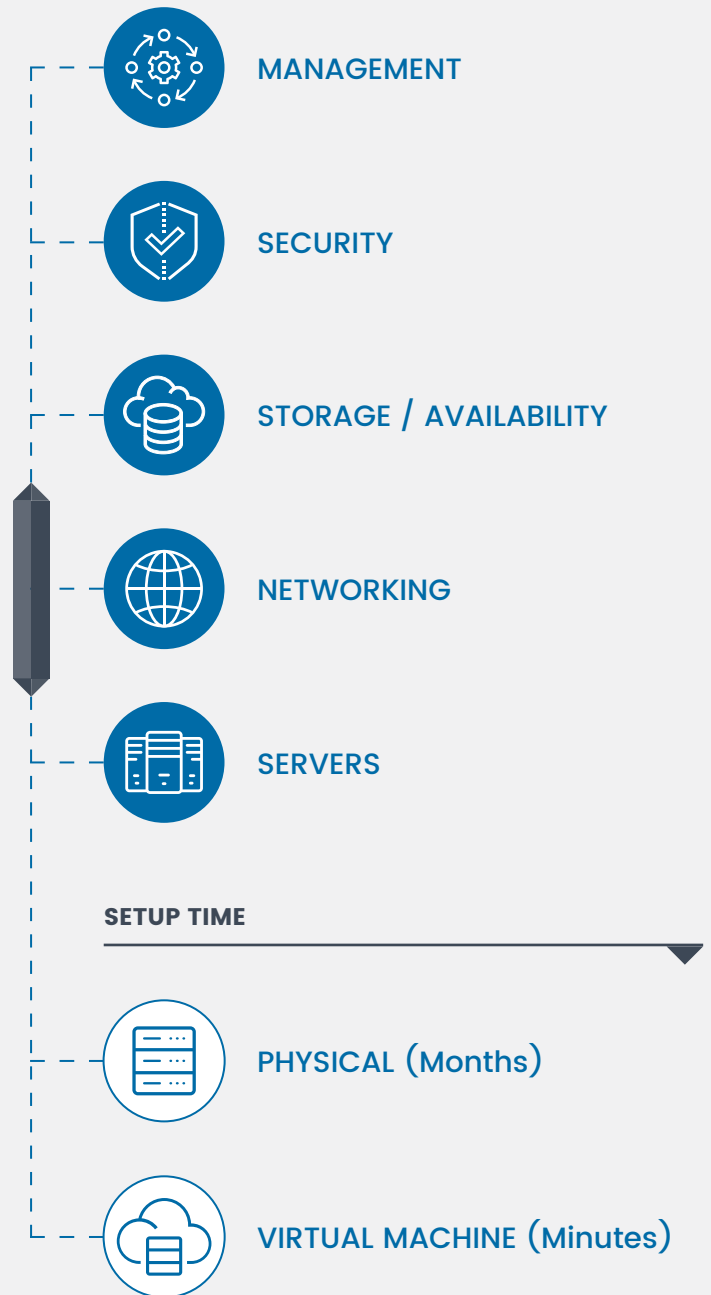

VPDC puts you in control of your entire infrastructure. You can cost-effectively build out a reliable platform for development, growth, or innovation. With stable backend virtualization technology and sophisticated components on top, a Virtual Private Data Center provides you with everything you need to support your business operations.

VPDC Delivers:

- Scalable on-demand resources
- Access to other phoenixNAP products through our unified network
- Complete redundancy on all levels from servers to network
- Hybrid Cloud environment powered by vCloud Director™
- Dedicated compute
- Low entry price point
- Contracts as short as 6 months
- Global availability
- vCloud Director management interface
- vCloud Air Network (VCAN) compatible

VPDC is Perfect For:

- Enterprise and Tier 1 Application Hosting Software-as-a-Service (SaaS)
- Development & test environments
- Disaster recovery configurations
- Primary application hosting
- Hybrid cloud
- Production website hosting
