

Cloud Backup for Bare Metal

While it is widely acknowledged that backing up servers is imperative to store valuable data - to many this can be an afterthought. To ensure server data is efficiently backed up, a solution with utmost reliability is needed. With our Cloud Backup for Bare Metal solution, you get a highly secure, lightning fast backup that gives you the control.

Control

Reliability

Security

Advantages of leveraging this solution:

- Take control of your server backups
- Easy self-service
- Protect your physical machine
- Manage backup of specific files and folders
- Lightning fast backups
- No contract pricing
- Backup MySQL & MSSQL

Cloud Backup for Bare Metal is a solution specifically designed with web hosting in mind. This solution provides ultimate protection of files and folders from corruption or accidental deletion.

Perfect for individuals who want to manage their own server backups, Cloud Backup for Bare Metal comes with access to the phoenixNAP self-service portal - so you can perform your own restorations or exclude individual folder or files from backing up. Comes with 5 client licenses ready for deployment and more available with purchase. With no contract pricing, it couldn't be easier to get more control of your server backups.

Getting Started:

To get your data replicated to a phoenixNAP Cloud Backup for Bare Metal solution, simply visit securedservers.com/servers/server-backup/ or contact our sales team at 800.260.4515.
